

## Care instructions for Corian

### How to clean Corian?

Clean your Corian product with **abrasive detergents, in a circular motion!** For this purpose, use any commercially available scouring milk and a damp cloth. The matt surface is thus retained. Clean the surface with a wet cloth and then wipe it dry.

Do not allow coloring agents, such as mascaras or hair dyes, to get in contact with the surface.

### What detergents should be used?

We recommend commercially available abrasive household cleaners such as CIF, Squib or Viss-Scouring milk. The use of aggressive cleaning agents should be avoided.

### How to remove stubborn stains or scratches?

Use a wet scouring sponge, for example a white Scotch-Brite sponge. Wipe with some bleach (only for white Corian), in a strong circular movements over the stain or the slight scratch and then over the entire surface and the washbasin. Then, clean the entire surface with scouring milk, as described above to obtain an evenly matted surface.

### Can Corian be repaired?

Corian is fully repairable. If a misfortune happens like a big scratch or a discoloration by an aggressive chemical substance, this can always be repaired by our repair service at any time.

### Is Corian heat-resistant?

Yes, up to 65°C. In alternation with cold water, hotter water can cause damages to the material.
